

Great coverage outside doesn't always mean great coverage inside. Building materials like concrete and tinted glass or even your building location can create indoor coverage gaps.

When this impacts your business, and your investment in wireless technology, a solution is required.

Spotwave overcomes the barriers to poor indoor coverage with a simple, affordable and effective solution that is approved by your wireless carrier.

SPOTWAVE

certified dealer

Affordable coverage where you need it

Where you use wireless

For most organizations, providing coverage across the building can be a simple and affordable investment.

Most locations only need to improve coverage in targeted locations so staff can communicate effectively regardless of where they are in the building. That's where Spotwave comes in.

- Corporate offices
- Boardrooms
- Warehouses
- IT rooms
- Below ground floors
- Mechanical rooms

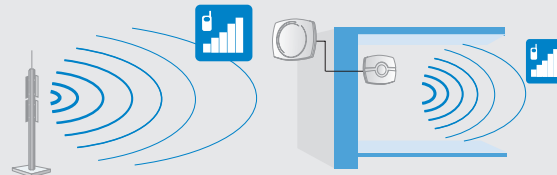

Spotwave systems are ideal for organizations looking to quickly and cost-effectively enhance indoor wireless connectivity in spaces ranging from 5,000 up to 500,000 sq ft.

How Spotwave systems work

Before Spotwave

Signal transmitted by the cell tower is blocked by the building materials or surrounding landscape, resulting in poor coverage within the building.

After Spotwave

Signal is captured by the Spotwave system and retransmitted inside the building, dramatically improving coverage and enabling mobile devices to be used more effectively.

Turn-key enterprise class systems

System features and benefits

- Coverage for 5,000 to 500,000 sq ft
- Enhances voice & data services
- Maintains consistent coverage area
- Maintenance-free operation
- Supports CDMA and GSM
- Approved for use with all major carriers in North America

25,000 sq ft system

Ideal for providing coverage for large residential, office or industrial spaces.

50,000 sq ft system

Ideal for providing coverage in large office or industrial spaces. Multiple systems can be deployed to create larger coverage zones.
